

THE ULTIMATE GUIDE TO

The Wild West Of The Digital Age;
Data Protection

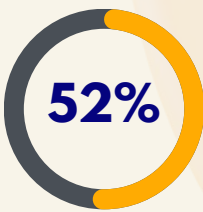

Data protection can be a challenge with the exploding amount of data being generated, endless rise of cyberattacks and stricter regulations,

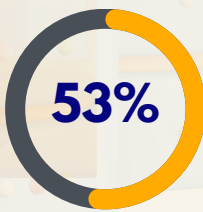

of organizations are moderately to extremely concerned about cloud security.

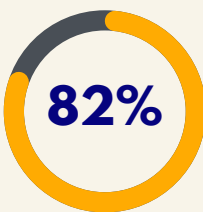

experienced ransomware attacks within 12 months

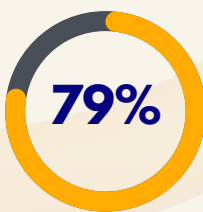

reported system outages due to infrastructure or network

reported system outages due to cybersecurity event

have an availability gap ; where they are unsure that their IT system will be available when they need it

have a protection gap ; where they are unsure that their data is protected from threats, disruption, modification or destruction

Modern Data Protection Solutions To The Rescue!

Traditional backup solutions are no longer sufficient to protect data in the cloud-first era.

Data is produced at an astounding rate daily and it's not just sitting on our computers anymore.

Modern data protection solutions should be able to:

- Handle large volumes of data
- Provide fast and reliable backup and recovery
- Supports physical/virtual/hybrid infrastructures
